Summary

Final-year CSE student at WIT Solapur (CGPA 9.70) with backend internship experience and a strong foundation in Java, Spring Boot, system designing and Linux-based shell scripting. Proven ability to build production-grade REST APIs and ORM-backed services. Solved 500+ DSA problems in Java, 300+ of them derived from first principles, from brute force to optimized solution.

Education

Walchand Institute of Technology, Solapur **Aug. 2023 – May 2027**
Bachelor of Technology in Computer Science And Engineering — India *CGPA : 9.70/10*

Experience

Codec Technologies **Nov 2025 – Dec 2025**
Software Development Engineer Intern (Java Backend) *Hybrid*

- Built an end-to-end Expense Management System featuring **automated categorical expense classification** to streamline expense organization and management.
- Improved **expense visibility and analytics** by developing a **Spring Boot RESTful** backend integrated with visual dashboard for structured expense tracking and reporting.
- Enabled **transaction traceability** by implementing **payment-method-based expense tracking**, maintaining a clear and organized history of financial transactions.
- Developed a **Java-based stock trading simulation system** using the Collections Framework, supporting **real-time user portfolio and stock management**.

Projects

Intel Flow – Smart News Backend System | *Java, Spring Boot, REST API, PostgreSQL, Docker* **2026**

- Built a **scheduled news aggregation** pipeline using Spring Boot to **fetch, normalize and store articles** from 3+ external providers in a common PostgreSQL schema.
- Developed a **keyword-based classification** weighted scoring with **weighted scoring** to categorize 100+ articles per cycle, achieving ∼85% accuracy on classification.
- Used Docker to **containerize the Spring Boot application**, ensuring consistent runtime dependencies across development and deployment environments.

RemoteHub - Remote Repositories Manager | *Java, Spring Boot, REST API, Github API, React* **2026 – Present**

- Developed a **GitHub management platform** using **Spring Boot REST API**, enabling users to manage repositories, branches, commits, files and other GitHub resources through a unified interface.
- Integrated GitHub API with a **layered backend architecture** to handle repository operations, authentication, request validation, and API response processing.
- Implemented **repository and Git operations** with structured service and data-access layers, improving **separation of concerns and maintainability** across the application.

Technical Skills

- **Data Structures & Algorithms (Java)**: Solved **500+ problems** covering arrays, strings, trees, graphs, recursion, and dynamic programming on LeetCode, HackerRank, HackerEarth.
- **Languages**: Java, Python, C, HTML, CSS, JavaScript, NoSQL : MongoDB, SQL : MySQL, PostgreSQL
- **Developer Tools**: VS Code, IntelliJ IDEA, Eclipse, Postman, Git, GitHub, Docker, Maven, Ubuntu Linux
- **Technologies/Frameworks**: Spring Framework, Spring Boot, Spring Security, JWT, OAuth, Spring Data, Spring Data MongoDB, Node.js, React JS, Hibernate, Tailwind CSS, LLM Integration

Certifications & Achievements

- Programming Contest(Engineer's Day 2025) Winner, WIT Solapur (view)
- Java Foundation Certification, Infosys Springboard (view)
- Top 1% in Programming with Generative AI Certification, Swayam NPTEL (view)

Leadership & Extracurricular

- Active member of **CSI** (Computer Society of India), **LOL** (Learn Out Louder) Coding Club and **ISTE** (Indian Society for Technical Education), participating in technical workshops, peer learning sessions and college-level tech events.
- Leading member of Field-Project, focusing on **Optimizing Long Waiting-Lines** at CNG Filling Stations during peak hours.
